

MONTHLY PERFORMANCE REPORT

SEO & Website Performance Review

Snow Africa Adventure — snowafricaadventure.com

REPORTING PERIOD

4 Aug — 3 Sep 2026

PREPARED FOR

The Owner / Directors

ISSUED

3 September 2026

Over the last 30 days we shipped **14 releases** focused on technical SEO and front-end quality. Search visibility moved in the right direction: the average position of tracked keywords improved and the site's indexed keyword footprint grew by nearly a quarter. The site's technical health is now effectively clean.

43.0**AVG. POSITION**

Improved from 45.1 — a gain of 2.1 places

22 / 12**UP / DOWN**

22 keywords rose, 12 fell, 37 unchanged

783**INDEXED KEYWORDS**

Up from 632 in July — a 23.9% increase

99.6/100**SITE HEALTH**

722 pages crawled, 0 broken links

What this means

The positive

Momentum is real but early. The keyword footprint grew from 512 (June) to 783 (August) — the site is being found for substantially more searches than three months ago. One keyword entered the **top 3** for the first time in this tracking set, and six keywords that were not ranking at all have entered the top 100. The group-departures cluster is the standout: "*kilimanjaro joining group departures*" climbed from position 13 to **position 2**.

The honest caveat

Two more keywords fell out of the top 100 than entered it (45 not ranking, up from 43), and eight keywords dropped out entirely — including "*tanzania camping safari*", which was at position 17. Average position improved because the keywords that *are* ranking moved up, not because more keywords started ranking. Both things are true at once, and the second one needs attention.

Where the bookings actually are

Domain Authority is **12**, against 33–47 for the competitors we share most keywords with. That gap does block the big informational terms. But it does **not** block the keywords that actually produce bookings: on "best kilimanjaro companies" a **DA-14** site ranks second and a **DA-5** site ranks seventh, ahead of Reddit and two DA-50 operators.

There is a cluster of roughly **1,100 searches a month** around choosing a Kilimanjaro operator, where advertisers pay **\$15–20 per click** and difficulty is low. You already have pages for it. They currently rank for nothing. This is the single clearest commercial opportunity on the site and is set out in Sections 06 and 07.

Two findings that outrank everything else

Google has never crawled 293 of your pages, including the commercial ones. The blog archive had no pagination, so 271 of 291 articles had no inbound link. Fixed this period — Section 08.

33 of 35 enquiries have never been actioned, among them roughly \$15,000–22,000 of identified revenue still waiting for a reply. Section 09.

14 releases across two working sessions (18 August and 3 September), totalling **80 files changed** and **3,158 lines added**. Every item below is a shipped, deployed change verified live on the production site.

Search engine optimisation

8 RELEASES

- **Page title overhaul.** 72 page titles were being truncated by Google because they exceeded the ~60-character display limit. All were rewritten to fit — 30 in August (28 static pages plus 2 found on a deeper recrawl), then 42 more in September covering blog articles, safari packages, trekking routes and day trips.
- **Duplicate title tags eliminated.** Pages competing against each other in search results for the same title were given distinct, specific titles.
- **Double-branding bug fixed.** Ten titles rendered as "... | Snow Africa Adventure | Snow Africa Adventure", wasting display space in results. Corrected to a single brand mention.
- **12 broken internal links repaired.** Flagged by audit; all now resolve, so link equity flows correctly and visitors no longer hit dead ends.
- **Blog page refresh restored.** Blog listing, article and category pages were serving stale cached versions; revalidation was fixed so new content appears promptly.

User experience & front-end

4 RELEASES

- **Layout shift eliminated** on the group-departures page — content no longer jumps as the page loads. This is a ranking factor (Core Web Vitals) as well as a usability issue.
- **Broken certification logos fixed** in the footer, which were rendering as grey boxes and undermining trust signals (KPAP, TATO and similar credentials).
- **Expired review widget removed.** A lapsed Trustindex widget was loading on every page; removed, and the site favicon was refreshed.
- **Brand slogan added to the header**, and the hero badge styling was cleaned up.

Content structure

2 RELEASES

- **Group-departures page restructured** — content reordered and de-duplicated so the booking information reads in a logical sequence.
- **Rendering fault repaired** that could break the departures page under certain navigation conditions.

Independently verified

After the work, an independent Ubersuggest crawl of **722 pages** returned a health score of **99.61 / 100** with **zero** long titles, zero empty titles, zero missing H1 tags, zero broken links and zero 4xx errors. We separately checked all 703 URLs in the sitemap by hand and reached the same result.

03 Technical site health

Full-site crawl completed 3 September 2026. Health score **99.61 / 100** across 722 pages.

AUDIT RESULTS — ERRORS AND WARNINGS

CHECK	ISSUES	STATUS	IMPACT
Long title tags	0	RESOLVED	Was the reported issue — 70 fixed
Duplicate title tags	0	RESOLVED	Fixed during this period
Empty title tags	0	CLEAN	—
Missing H1 headings	0	CLEAN	—
Duplicate meta descriptions	0	CLEAN	—
Broken links	0	RESOLVED	12 repaired this period
4xx error pages	0	CLEAN	—
Slow-loading pages	0	CLEAN	—
Non-SEO-friendly URLs	4	OPEN	Low — needs redirects to fix safely
Temporary (307) redirect	1	OPEN	Low — passes no link equity

Remaining item — long URLs (4)

Four pages have unwieldy URLs, the worst being a porters article with a 96-character path. Renaming these requires permanent redirects to avoid losing their existing rankings, so we have deliberately **not** changed them without your sign-off.

Remaining item — 307 redirect (1)

The `/mount-kenya/` page uses a temporary rather than permanent redirect, so it passes no ranking value to its destination. Low risk to fix; scheduled for the next cycle.

Worth knowing — crawler throttling

262 of the 722 pages returned a "blocked" response to the audit crawler, while all 703 sitemap URLs responded normally to our own checks. This is the hosting platform rate-limiting automated crawlers under load. It is not currently affecting Google, but it is worth monitoring — aggressive throttling can slow how quickly new content gets indexed.

04 Keyword performance

71 tracked keywords, United States / desktop, measured 4 August against 1 September 2026.

22

8 days lemosho route	70	41	Out	MEDIUM
tanzania tour operators	70	54	Out	MEDIUM
kilimanjaro climbing companies	210	57	Out	HIGH

Reading the declines honestly

"Tanzania camping safari" (was 17) and "ultimate kilimanjaro packing list" (was 21) were close to page-two visibility and are now outside the top 100 — usually a sign a competitor published something stronger, or the page lost internal link support. Both will be rebuilt next cycle.

"Kilimanjaro climbing companies" is the one to watch. It looks minor at 57, but it targets the operator-selection cluster in Section 07 — the site's highest commercial-value keywords — so its recovery is recommendation 2, not a routine fix. The other five sat at 24–57, where positions fluctuate routinely.

The eight sites below compete with Snow Africa Adventure for the largest number of shared keywords. This is the clearest picture of where the business actually stands in search.

COMPETITIVE LANDSCAPE — ORGANIC SEARCH

DOMAIN	DOMAIN AUTHORITY	ORGANIC KEYWORDS	BACKLINKS	SHARED KEYWORDS
climbing-kilimanjaro.com	47	15,202	21,975	369
altezzatravel.com	41	20,492	270,139	373
climbkilimanjarguide.com	38	2,066	43,006	193
iantaylortrekking.com	37	11,134	62,869	171

followalice.com	33	11,439	8,694	299
zaratanzaniaadventures.com	20	12,137	11,570	257
hike-kilimanjaro.com	14	817	195	159
snowafricaadventure.com	12	783	1,127	—

Where the business actually stands

Snow Africa Adventure has the **lowest Domain Authority in its own competitive set** and by far the fewest backlinks — 1,127 against 8,694 for the next-smallest serious competitor and 270,139 for Altezza. This is not a content problem. The site now has 291 published articles and a near-perfect technical score; the pages are there and they are sound.

The obvious conclusion would be that authority alone decides everything. Checking the actual search results shows that is **only half true** — and the half that is false is the commercially important half.

Authority blocks some keywords — but not the ones that sell

We examined the live results page for three keyword types. On informational terms, authority dominates: for "*best time to climb Kilimanjaro*" the lowest-authority site in the top 17 is DA 36, Reddit holds position 2, and an AI Overview sits above everything.

On **operator-selection** terms the picture reverses completely. For "*best kilimanjaro companies*", a **DA-14** site ranks **second** — ahead of Reddit (DA 92), Facebook (DA 96) and two DA-50 operators — and a **DA-5** site ranks seventh. At DA 12, Snow Africa Adventure is squarely inside that range *today*, with no new links required.

Two conclusions that follow

Head terms remain out of reach. "Tanzania safaris" (12,100/month) and "climbing kilimanjaro" (6,600/month) are not realistically winnable in the next 6–12 months. We would rather say so than report against targets that cannot be met.

Position on the page matters more than the page itself. Across every results page we examined, position 2 drew 23–278 clicks while positions 6–15 drew between 0 and 4. Reaching page one is not the goal — reaching the **top three** is. This is why the group-departures result (position 2) is worth more than a dozen rankings in the thirties.

Search volume is a poor guide to revenue. What follows ranks opportunities by **commercial intent** — measured by what advertisers actually pay per click — filtered to what is winnable at the site's current authority.

THE OPERATOR-SELECTION CLUSTER — HIGHEST COMMERCIAL VALUE ON THE SITE

KEYWORD	SEARCHES / MO	COST PER CLICK	DIFFICULTY	CURRENT POSITION
kilimanjaro tour operator	480	\$19.68	19	Not ranking
best kilimanjaro tour operator	480	\$15.10	17	Not ranking
best kilimanjaro companies	90	\$16.51	24	Not ranking
kilimanjaro trekking company	30	\$11.38	29	Not ranking
climbing kilimanjaro tour operator	20	—	10	Not ranking
Cluster total	~1,100	\$15–20	Low	0 ranking

Why this is the priority

Advertisers pay roughly **\$20 a click** for "kilimanjaro tour operator" because the person searching it is choosing who to hand \$2,000–4,000 to. Google classifies the intent as **Commercial**. Difficulty is 17–24, which is low — and as Section 06 showed, sites at DA 5 and DA 14 already rank here.

You have three pages built for exactly this cluster — */best-kilimanjaro-tour-operators/* (4,175 words), */kilimanjaro-climbing-companies/* (3,243 words) and */best-tanzania-tour-operator/*. They are substantial and internally linked. **All three currently rank for nothing in the United States.** The asset exists; the visibility does not.

What the sites that win are doing differently

Operators who rank for these terms do it with their **homepage**, titled as a company, not with a "best operators" article: "*Home — Best Kilimanjaro Company*" (DA 5, position 7), "*The #1 Guide Company for Climbing Kilimanjaro*" (position 8), "*Climb Kilimanjaro with Local Experts | 98.8% Success*" (DA 30, position 9). Each pairs the category word with a credibility claim.

The Snow Africa homepage is titled "*Tanzania Safaris & Kilimanjaro Treks*" — no "operator", no "company", no proof point. The phrase "locally owned Tanzania tour operator" appears only in the meta description, which carries no ranking weight. That is a low-effort, high-leverage fix.

Separately: the one site beating everyone at position 2 is an **independent reviewer**, not an operator. A tour operator publishing its own "best tour operators" list faces an inherent credibility problem for that query — which may explain why the existing pages have not taken hold. Being *listed* on independent review sites is likely to outperform writing our own.

HIGH VOLUME, LOW RETURN — DELIBERATELY DEPRIORITISED

CLUSTER	SEARCHES / MO	LOWEST DA IN TOP 10	WHY WE ARE NOT CHASING IT
"best time to climb kilimanjaro"	880	36	AI Overview at the top; Reddit at position 2 takes 278 clicks. Position 5 earns 4 clicks.
"kilimanjaro cost / price"	880	32	Reddit again at position 2 with 278 clicks. Requires roughly DA 32+ to compete.

Search Console access was obtained after the first draft of this report, and it changes the diagnosis. The pages are not losing to competitors. **Google has never read them.**

353**PAGES INDEXED**

Eligible to appear in search

790**NOT INDEXED**

More than twice the indexed count

293**NEVER CRAWLED**

Found, but never fetched by Google

271**UNLINKED POSTS**

Of 291 published articles

What Search Console reports

293 pages sit under “Discovered — currently not indexed” with a last-crawl date of **N/A**. These are commercial pages: the Kilimanjaro tour-operator guide, African safaris, Big Five Tanzania, budget safaris, climbing from the USA. Inspecting the operator page directly returns “*URL is not on Google*” and, critically, “**Referring page: None detected**”.

Google found these pages in the sitemap, saw nothing on the site linking to them, judged them unimportant and never spent the crawl budget. The 4,175-word operator guide has never been fetched.

The cause: the blog archive had no pagination

The blog index listed only the 20 most recent posts and offered no way to reach the rest — no page 2, no “load more”. **271 of 291 published articles had no inbound link anywhere on the site.** Years of content was invisible to Google, not because it was poor, but because nothing pointed at it.

Fixed during this period

The archive is now paginated across 15 pages, verified to expose **311 post links** — every published article is reachable. Six commercial pages that had no inbound link at all, including one already earning 1,947 monthly impressions at position 8.6, were added to the site-wide footer. Indexing was requested directly in Search Console for the highest-value pages.

Recovery is not immediate. Google must re-crawl, follow the new links and reassess: **expect 2–6 weeks**, and some pages may still not be crawled at this domain authority.

09 The leads you already have

Everything else in this report concerns getting more visitors. This section concerns the enquiries the website has **already delivered**, and it is the most commercially urgent page in the document.

GENUINE ENQUIRIES AWAITING A REPLY

RECEIVED	FROM	WHAT THEY ASKED FOR	WAITING	EST. VALUE
12 Jul	United States	Prices for a 7-day Machame climb, party of two, wanting to <i>join a group departure</i> , any date after 30 Nov	53 days	\$4,000–5,000
10 Aug	Poland	Custom quote: Lemosho 8 days, 2–4 people at \$2,890 per person	25 days	\$5,800–11,600
21 Jul	Canada	Detailed question about a partial ascent — needs a considered reply	44 days	consultative
Mar 2026	Netherlands	Booking for 2 climbers — still unpaid, still marked enquiry	5.5 months	\$5,360

Roughly \$15,000–22,000 of identified revenue is sitting unanswered

The notifications are working. 111 alert emails were delivered successfully to info@snowafricaadventure.com, the director’s Gmail and by SMS, and an administrator signed in to the dashboard on 1 September. The alerts arrive; the enquiries are not worked.

The July enquiry is the most striking: two people asking explicitly to *join a group departure* — precisely the product that now ranks second on Google. The SEO worked, the lead arrived, and no one replied.

Two qualifications, stated plainly

If replies are being sent by email or WhatsApp without updating the dashboard, the database cannot see them. That said, no confirmed booking or deposit has ever been recorded, which suggests otherwise.

A daily follow-up digest existed but had never once run — the scheduled jobs were not executing. That was repaired during this period and the first digest, listing 25 outstanding enquiries, has been sent. It guarantees you are *told*; it cannot make anyone reply.

In priority order, weighted by likely commercial return rather than ease.

PROPOSED WORK PLAN

#	ACTION	WHY IT MATTERS	EFFORT
1	Reposition the homepage for "kilimanjaro tour operator". Put the category word and a credibility proof point — summit success rate, years operating, KPAP status — into the page title and main heading, matching the pattern used by every operator currently ranking.	Targets a \$19.68-per-click term at difficulty 19, using the exact format proven to work at DA 5–14.	Low
2	Relaunch the three operator-selection pages. Rebuild <i>/kilimanjaro-climbing-companies/</i> (was position 57, now outside the top 100), plus the two sibling pages, with genuine comparison substance and stronger internal linking from the Kilimanjaro hub pages.	~1,100 searches/month at \$15–20 per click, and the pages already exist.	Medium
3	Pursue independent operator listings. The site beating everyone for "best kilimanjaro companies" is a third-party reviewer. Target inclusion in those round-ups, plus KPAP, TATO and SafariBookings profiles.	Being listed by an independent voice outperforms self-published "best operator" pages.	Medium / ongoing
4	Recover the two lost pages. Diagnose and rebuild "tanzania camping safari" (was 17) and "ultimate kilimanjaro packing list" (was 21), including competitor comparison and internal link support.	Both were within reach of page-two traffic and are now invisible.	Low
5	Extend the group-departures cluster. It holds positions 2 and 6 — the clearest proof of what works. Expand into adjacent terms: dates, group sizes, joining options, private vs. group.	Already winning, and top-three placement is where the clicks actually are.	Medium
6	Begin steady authority building — Tanzania tourism directories, guest articles, and digital PR around the porter-welfare credentials.	Still needed to reach the larger informational terms, but no longer the first move.	High / ongoing
7	Close the two open technical items — the 307 redirect and, with your approval, the four long URLs (with permanent redirects in place).	Completes the technical foundation.	Low
8	Act on the Search Console data now flowing. Search Console was already connected but had not synced since April; that is repaired and 992 records imported. Review crawl and coverage monthly.	Replaces third-party estimates with Google's own measured figures.	Low

A note on expectations

Items 1 and 2 are the fastest route to commercially useful traffic, because the pages already exist and the target keywords are low-difficulty. Even so, repositioning takes **4–8 weeks** to settle in the rankings, and top-three placement is not guaranteed.

Item 6, authority building, typically takes **3–6 months** to show. It has moved down the list because the operator-selection cluster does not require it — not because it stopped mattering.

Corrected figure: Search Console now supplies Google's own numbers rather than a

Corrected figure. Search Console now supplies Google's own numbers rather than a third-party estimate. With the full history backfilled — 243 days across nine months — organic search delivers **about 91 clicks and 25,000 impressions a month**, a click-through rate of **0.36%**, because the average position is around 43. Traffic is flat, not falling — between 86 and 98 clicks every month from March to August.

So that every figure in this report can be traced and independently checked.

SOURCES

FIGURE	SOURCE & METHOD
Keyword positions	Ubersuggest rank tracking, active since May 2024. 71 keywords, US / desktop , comparing the 4 August and 1 September 2026 collections.
Average position	Mean position of ranking keywords; non-ranking excluded.
Indexed keyword count	Ubersuggest domain index, US. June 512 → July 632 → August 783.
Domain Authority & backlinks	Ubersuggest domain metrics. DA is a third-party 0–100 estimate, not a Google metric.
Competitor set	Ubersuggest competitor analysis by shared keyword count. Two irrelevant results (nasa.gov, our-ancestries.com) were excluded as non-competitors.
Opportunity keywords	Ubersuggest keyword research plus the project's 680-candidate opportunity list, filtered to commercial intent and reachable difficulty.
Cost per click	Ubersuggest CPC — a proxy for commercial intent , not a measure of what the traffic will earn.
Search results analysis	Live results pages for three keywords, with each ranking site's authority and click estimate — the evidence behind Sections 06–07.
Site health & audit	Ubersuggest site audit, full crawl of 722 pages, 3 September 2026.
Title verification	All 703 sitemap URLs fetched directly and every rendered title measured. Both methods agree.
Indexing & crawl data	Google Search Console, read directly on 4 September 2026 — Page Indexing, URL Inspection, Sitemaps and Manual Actions. Google's own data, not an estimate.
Enquiry & booking data	The production database: every Inquiry and Booking since January 2026, with notification delivery cross-checked against the email log.
Work completed	Version control history, 4 August – 4 September 2026. Every change verified live in production.

Limitations you should be aware of

Two corrections issued. An earlier draft advised connecting Search Console; it was already connected and simply had not synced since April. And the first corrected traffic figure, drawn from that partial data, was itself too low — several months held only four to nine days of records. The full history has since been backfilled (243 days, 111,716 rows), and the figures quoted here are measured against complete months. Where any earlier number disagrees, believe this one.

Rank data covers one market — US desktop. The UK, Australia, Canada and Japan are tracked but not included here.

Correlation, not proof. Ranking gains follow the work chronologically, but Google does not disclose why positions change — algorithm updates, competitor activity and seasonality all contribute. We report what moved, not what caused it.

Section 07 is a judgement, not a forecast. The volumes, costs per click, difficulty scores and competitor authority figures are measured; the conclusion we draw from them is our professional reading. No position or booking volume is promised, because neither can be guaranteed.
